#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE \_\_\_\_ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2832

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Enomoto et al. in view of Stoffel ((WO95/35577). Enomoto discloses, except the material of barium titanate, the claimed invention at Fig. 1 , with casing 1, PTC element 22, electrodes 27a, 27b, insulating holder 35, tap terminals 46, spring terminals 43, 38, weak portion surrounding cutout 62, see Figs. 11-12, with cap 32, having walls 48a, 48b and holes 51a, 51b. Enomoto discloses at col. 4, lines 5-25, a ceramic PTC thermistor, that is standard in the art, see cols. 1-2, and must be fused Due to excessive temperatures, while Stoffel discloses that is preferable at the abstract to employ for a similar ceramic PTC fused thermistor, the barium titanate material, so that it would have been obvious to employ the standard ceramic PTC barium titanate thermistor since that is the well known PTC material for such thermistors. In claims 2-5, the weak proton is formed as an integrated piece at a point between and/or overlapping or including or not including the spring and tap terminal portions, so that depending on what one considers the tap or spring, the claims are met. For claim 3, the two weak portions are the thinner portions on each side of the cutout. In claim 5, the angle is 90 degrees for the cutout. In claims 6-7, the square cutout has four edges cutout. For claim 8, see Table 1.
